CONCRETE BENCH 268 B

1,378.00 €

Bench model **268-B** is made from high-strength fiber-reinforced concrete with a homogeneous aggregate structure of natural marble or granite stones. The structural aggregates have a strictly defined size and color range, determining the main textures: white, scatter, gray, or brown. Various technological methods of treating the concrete surface create a delicate combination of fine polish and subtle relief. The metal components making up the seat and back of the bench are made of stainless steel. The seat and backrest are made from premium wood, available in two options: spruce or **eco-friendly Resysta®** wood. Developed in Germany, this innovative material is 100% recyclable and eco-friendly, offering a **15-year warranty** against cracking and delamination (provided by the manufacturer). The treatment of the wooden elements and the concrete surface with protective coatings adds additional resistance to atmospheric conditions. It can be used individually or as a component of a composition alongside **Modular Bench Model 268**. An exterior solution for any park, garden, or playground.
