CONCRETE BENCH 212 ER

976.00 €

The bench is made of high-performance reinforced fiber concrete and polished natural aggregate. The structural marble and granite stones of the aggregate are natural and can be finished in different color combinations. The concrete bench is combined with certified wood. The seating area is specially designed and does not allow water to be retained under the wooden elements. All concrete surfaces are polished and further treated with a protective coating, which makes the product even more resistant to aggressive weather conditions. The compact size of the model makes the bench the perfect complement to smaller urban spaces, alleys, playgrounds, public buildings and squares.
