CONCRETE MODULAR BENCH 156 ER

1,704.00 €

Modular bench combining high-performance concrete, metal construction and certified wood. The concrete legs are with embossed surface from natural aggregate. The structure is made of marble or granite stones of defined size in different color combinations. The metal structure is electrogalvanized and powder coated. These technological methods protect the metal from corrosion and increase its performance. For Modular Bench 156, two certified types of wood are available – spruce softwood and exotic hardwood bamboo. The concrete and planks are further treated with a protection coating, which makes the product even more resistant to aggressive atmospheric conditions. The elements connecting the individual structures are from stainless steel. An option is available to mount the modules individually or with the addition of further modules offering combinations of different shapes.

A design solution that evokes a catchy shape and smooth curved lines that intuitively suggest the idea of infinity.
